

# NEW JERSEY HEADSTART DESIGN COMPETITION

Morristown, New Jersey

This is an entry to a national design competition for a statewide prototype for a headstart facility. The building program called for a facility which was responsive to its site, fostering indoor/outdoor play, and would serve as a center for neighborhood activities. 5 classrooms were to be provided. To provide for indoor play plus a major meeting space for the community, a large indoor "piazza" was designed as the central circulation space. Outdoor play areas are oriented along an arcing pathway which overlooks a lake.
